

# Daniil Dolotkazin

Junior Frontend Developer

## Profile

I am a **novice front-end developer**, but I currently work as an *automatic control systems engineer* in St. Petersburg.

The **web-industry seemed more interesting** to me. During the year I actively study the features and technologies of frontend-development.

To evaluate the results of my self-study, you can follow to the **Github** and the **portfolio site** links.

So I would like to start a career as a *frontend developer*, also **improve and hone my layout and programming skills** to grow to team-lead in at least 5 years.

## Employment History

**Automatic control systems engineer at LLC “SPF System-Service”, Saint-Petersburg**

October 2017 – Present

- Team development of design documentation and electrical circuits for low voltage package module of allocation and control
- Working with customer comments and edits

## Education

**Bachelor's degree in Power Plant Engineering and Automatic Control Systems, Samara State Aerospace University, Samara**

September 2013 – August 2017

**Master's degree in Control Engineering, Saint-Petersburg State University of Information Technologies, Mechanics and Optics, Saint-Petersburg**

September 2017 – Present

I dropped out of the second year because I realized that I did not want to connect my life with this field of science.
